

What is connected to what

The stack card’s vocabulary, drawn as relations rather than layers. Every line is declared on a node page.

READ THE DASHED GREEN LINES FIRST

📄 **Model** ↔ **harness** — The confusions are the point of the guide. Nearly every wrong claim about “the AI” is one of these two mistaken for the other.

THE ARROWS ARE DIRECTIONAL

📄 **Consumes** — A harness consumes an inference API, not the reverse. Which way the verb runs is usually the whole disagreement.

NOTHING HERE IS DRAWN BY HAND

📄 **Declared once** — Each relation is written on one page and the inverse derived, so the two sides can never disagree — and deleting one deletes this line.

A vocabulary is not a list. These terms are worth learning as a shape, because almost every question about “the AI” turns out to be a question about which arrow you are standing on.
